319-400-7061

3540 Foxana Drive, Iowa City, IA 52246

Qualifications: Organized and effective team leader who successfully directs numerous custom application development projects through the entire development life cycle. Demonstrated technical adaptability in 20 years of experience in application development, maintenance, testing, debugging, and system architecture.

Recent Accomplishments:

- Designed, built and deployed RabbitMQ infrastructure onto AWS for use as a message bus for on-premise enterprise applications.
- Replaced asset management system in communication engine with a front-end built in VueJS and backed by AWS S3 and CloudFront.
- Deployed a multi-stage event data pipeline for user event tracking using Snowplow Analytics on AWS.
- Built secure self-service tool for multi-domain usage to facilitate password reset and changes using institutional data for challenge questions.
- Facilitated and led a daylong workshop for community developers on advanced CSS techniques.

Professional Experience:

Senior Application Developer

The University of Iowa – ITS – Architecture Team

January 2014 – Present Iowa City, IA

Primary responsibilities include architect, build and support critical enterprise applications and information systems used to further the University of Iowa's core missions.

- Lead development efforts engineering software critical to the institution's mission.
- Provide leadership and guidance to team on migration to cloud technologies.
- Provide leadership to other software development groups on campus on software solutions and methodologies.
- Research and develop proof of concepts with new technology.
- Develop automated testing and deployment pipelines.
- Assist departments in automating and refining their communication strategies.
- Construct and maintain technical documentation for applications.
